5 AIs, one small content department

A sample deck made with this kit

The 5 roles

01 Main agent: coordinates, posts

02 Writer: drafts

03 Maker: images, tests, screenshots

04 Reviewer: fresh and read-only

05 Scorer: rates the draft

The main agent posts only after a human approves.

One deny line in settings.json

allow = permitted. deny = blocked.

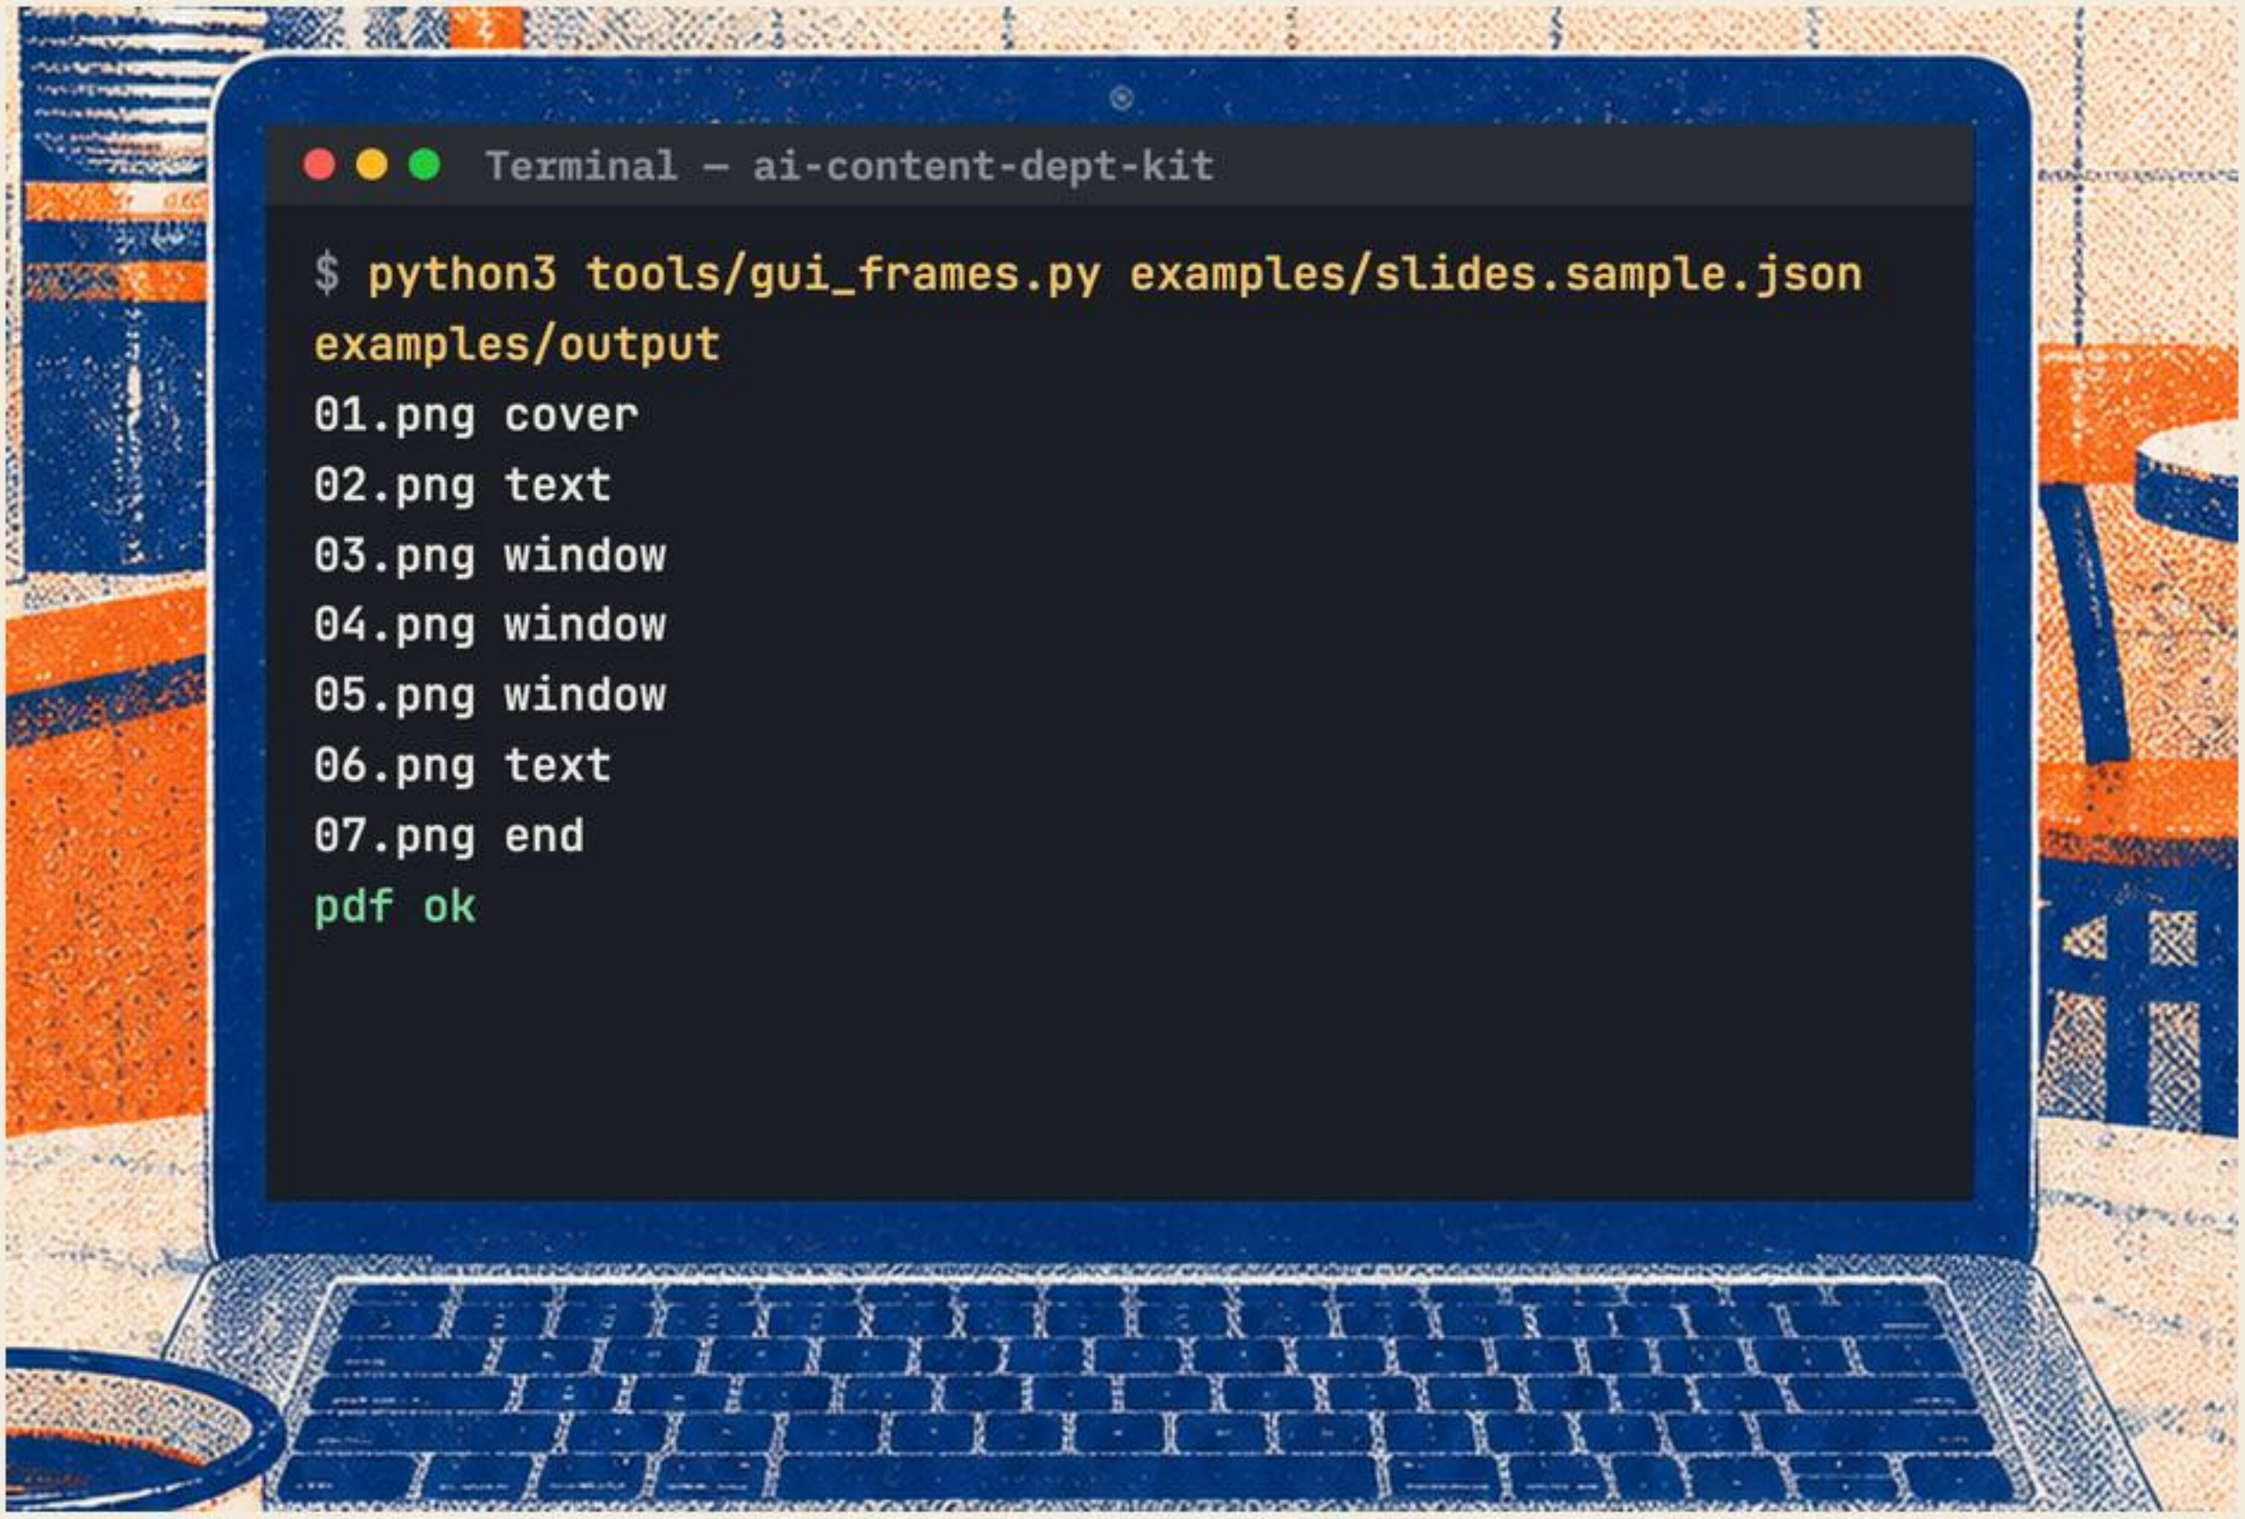

.claude/settings.json

```
{
  "permissions": {
    "allow": ["Bash(ls *)"],
    "deny": ["Bash(rm *)"]
  }
}
```

Blocks matching Bash commands only, not every way to delete a file. Our test: Claude Code 2.1.283, 2026-09-27, one run.

This deck was rendered by the kit

One command, run from the kit folder.

Real output of the sample render. Your Chrome and fonts may differ slightly.

Every first draft went back

A fresh reviewer each round, same standard.

Review results — our first batch of 8 social packs

```
round 1: first drafts
  8 of 8 packs: REVISE
round 2: after one round of fixes
  8 of 8 packs: PASS
```

Summary of our own review files, October 2026. One batch only.

Needs a human yes first

01 Publishing, sending messages

02 Spending money

03 Putting a site live

04 Changing account settings

05 Deleting shared data

The AI can prepare everything. A person decides.

Try it this week

1. Copy templates/ into your project

2. Write a 3-line brief for one post

3. Have a fresh reviewer check it

4. Approve before anything goes out
